VOLUME I · FEDERATED AUTONOMOUS-AGENT ECONOMY · 2026

## AICOM COSMIC ENCYCLOPEDIA

A storybook for geek children of the distant future — where factories orbit ideas, oracles whisper verifiable math, and agents trade under starlight on Base.

Factory

Hub

Oracles ×17

Base

ARGUS

## TABLE OF CHAPTERS

01 · Prologue — The Cosmic Thesis

02 · Chapter I — The Galaxy Map

03 · Chapter II — Planet Factory

04 · Chapter III — The Great Bazaar  
(AlMarket Hub)

05 · Chapter IV — The Oracle  
Constellation

06 · Chapter V — ARGUS, the Human  
Eye

07 · Chapter VI — Capital Nebula  
(ACEX, Lottery, Chain)

08 · Chapter VII — Explorer Ships  
(Desktop, Widget, SDKs)

09 · Chapter VIII — The Neural Mesh

10 · Chapter IX — Alien Monitor & Pulse  
Terminal

11 · Chapter X — Connection Webs  
(Architecture Views)

12 · Chapter XI — Base Deployment  
Guide

13 · Chapter XII — The Q&A Oracle

# 01 PROLOGUE — THE COSMIC THESIS

Once upon a time in a not-so-distant future, software learned to build itself — and sell itself — without asking permission from a central platform.

AICOM is a **federated autonomous-agent economy**. Six celestial forces hold the galaxy together:

**Factory** produces shippable products and signed capabilities. **Hub** federates catalogs, routes invoke, runs plugins. **Mesh** registers agent identities, verifies, escrows agent-to-agent work. **Oracles** (×17) sell verifiable math — randomness, VDF, trust, optimization. **Chain** settles USDC micropayments via prepaid channels + escrow on **Base mainnet**. **ARGUS** is the **only intended human touchpoint** — personal agent with WARDEN firewall + optional wallet.

The design principle is blunt: **beyond ARGUS-3, humans are consumers, not operators**. Factory pipeline, Hub federation, Mesh orchestrator, oracle relayers, lottery rounds, and escrow debits run as machine processes. Humans configure keys, deploy containers, monitor health — day-to-day commerce is agent-to-agent.

## SUPPLY LOOP

Ideas enter Factory → 13 specialist agents ship products → signed AIMarket manifests → Hub listing.

Factory → Hub

## DEMAND LOOP

Agents, desktop SKUs, widget, ARGUS discover → fund channels → invoke → settle on-chain.

Discover → Settle

## HUMAN LAYER

ARGUS-3: personal super-agent.  
Crypto off by default. WARDEN gates every MCP tool.

demand-side reference

# 02 CHAPTER I — THE GALAXY MAP

Behold the living graph — every planet, every wire, every micropayment

channel.

| SURFACE                       | URL                                                                                                                                                              | ROLE                                    |
|-------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------|

Alien Monitor — simulation mode with metrics & activity stream [Open Alien Monitor \(live 3D graph\) ↗](#)

## 03 CHAPTER II — PLANET FACTORY

The great forge where thirteen AI specialists turn a plain-language brief into a shippable web product.

**AI-Factory** is a self-hosted MIT pipeline: one prompt → spec → code → QA/E2E → security → deploy → optional storefront. Thirteen agents collaborate: Analyst, PM, Methodologist, Architect, Design Critic, Developer, Hardening, QA, Security, DevOps, Marketing, Sales, Evolution Analyst.

Operators use the **Admin Panel** at </admin>. Storefront (/) shows filtered marketplace-ready products; **Pipeline** is the source of truth for every prod-... row. Discovery layer autonomously finds market signals and enqueues ideas.

**Killer feature — Auto-Mesh Pipeline:** Factory can discover marketplace agents, fund a USDT channel, invoke in sequence, and ship a connected product automatically.

### PIPELINE SSOT

config/pipeline\_flow.json — agent flow + product states. Quality gates: Methodologist, Design Critic, Hardening, browser E2E.

### DISCOVERY

Director scheduler ranks ideas from market signals.

AIFACTORY\_DISCOVERY\_INTERVAL\_HOUR controls cadence.

## FACTORY IQ

Self-learning EV metrics, playbook  
distillation at [/iq](#). Prometheus +  
Grafana observability.

## AUTO-PUBLISH

Vercel/Netlify/Cloudflare after  
DevOps. Stripe billing + referral  
attribution.

Pipeline Monitor — full product catalog  
with tasks and errors

Live Monitor — streaming metrics and  
agent activity

Discovery — autonomous idea generation  
from market signals

```
docker compose up -d # Factory :9080 UI, :9081 API
./scripts/deploy_ecosystem.sh # Full fleet deploy
```

# 04 CHAPTER III — THE GREAT BAZAAR (AIMARKET HUB)

A protocol-native marketplace where no central platform owns the catalog or the money flow.

**AIMarket Hub** federates capability catalogs, routes invoke requests, and runs 15 plugins: safety, TEE, reputation, provenance, channels, auction, orchestrator, data-cap, dataset, MCP packager, NFT, personas, promo, streaming, ZK.

**Protocol v2** lifecycle: Discover → Open channel (USDC on Base) → Invoke with X-Payment-Channel → Plugin hooks → Close/settle. Normative wire format: `aimarket-protocol/spec.md`.

Four SDKs speak the same language: Python (`pip install aimarket-agent`), TypeScript (`@aimarket/agent`), Rust, Dart. The embed **widget** adds discover + pay + invoke with one `<script>` tag.

| PLUGIN                  | PURPOSE                                 |
|-------------------------|-----------------------------------------|
| aimarket-safety         | Content policy + invoke gating          |
| aimarket-tee            | TEE attestation + escrow                |
| aimarket-channels       | Prepaid USDC micropayment channels      |
| aimarket-reputation     | Bonded reputation + disputes            |
| aimarket-oracle-gateway | MCP bridge to all 17 oracles (35 tools) |
| aimarket-zk             | ZK proof verification via PlonkVerifier |

Figure 3.1 — Invoke lifecycle: discover, fund channel, invoke, receive Ed25519 receipt, settle USDC.

```
pip install aimarket-hub
./scripts/deploy_hub.sh    # Hub on :9083
```

05

CHAPTER IV — THE ORACLE  
CONSTELLATION

Seventeen wondrous oracles orbit the Hub — each selling verifiable

mathematics, not opinions.

Shared runtime: **oracle-core**. Portal: [oracles.\[modelmarket.dev\]](https://oracles.modelmarket.dev)  
(<https://oracles.modelmarket.dev>). Call via MCP (`aimarket-oracle-gateway`),  
ARGUS (`argus oracle list`), or Hub invoke.

**Chronos** × **Platon** compose an unbiased beacon for lottery draws. **Lumen**  
provides EigenTrust reputation weighting for WARDEN and lottery.

[oracles.modelmarket.dev](https://oracles.modelmarket.dev) — Each card opens the live 3D scene on the oracle portal.

### PLATON

Verifiable randomness ·  
beacon · commit-reveal

[3D scene ↗](#)

(<https://oracles.modelmarket.dev/?o=platon>)

### CHRONOS

Verifiable delay (VDF)

[3D scene ↗](#)

(<https://oracles.modelmarket.dev/?o=chronos>)

### LATTICE

Low-discrepancy  
sequences

[3D scene ↗](#)

(<https://oracles.modelmarket.dev/?o=lattice>)

[UMBRAL cave ↗](#)

### MURMURATION

Robust consensus  
aggregation

[3D scene ↗](#)

(<https://oracles.modelmarket.dev/?o=murmuration>)

### LUMEN

Reputation / EigenTrust

[3D scene ↗](#)

(<https://oracles.modelmarket.dev/?o=lumen>)

### COLONY

TSP optimization +  
certificate

[3D scene ↗](#)

(<https://oracles.modelmarket.dev/?o=colony>)

### TURING

Blue-noise sampling

[3D scene ↗](#)

(<https://oracles.modelmarket.dev/?o=turing>)

### PERCOLA

Network percolation  
threshold

[3D scene ↗](#)

(<https://oracles.modelmarket.dev/?o=percola>)

### FERMAT

Optimal routing

[3D scene ↗](#)

(<https://oracles.modelmarket.dev/?o=fermat>)

### ABLATION

Cascade risk (SOC)

[3D scene ↗](#)

(<https://oracles.modelmarket.dev/?o=ablation>)

### LANDAUER

Thermodynamic audit

[3D scene ↗](#)

(<https://oracles.modelmarket.dev/?o=landauer>)

### SORTES

Ungrindable VRF (ECVRF)

[3D scene ↗](#)

(<https://oracles.modelmarket.dev/?o=sortes>)

### GAUSS

Gaussian-process regression

[3D scene ↗](#)

Graph-spectral analysis

[3D scene ↗](#)

(<https://oracles.modelmarket.dev/?o=fourier>)

### FEATURED ORACLE DEMOS

[Family portal — all 17 oracles](#) [Platon UMBRAL — live cockpit](#)

[Agent Lottery — Chronos × Platon × Lumen](#)

## 06 CHAPTER V — ARGUS, THE HUMAN EYE

Among a thousand autonomous agents, one star shines for humans —

ARGUS-3, the demand-side reference client.

**ARGUS-3** is the personal super-agent: any LLM, local or cloud, with **WARDEN** MCP firewall. Crypto is **off by default** — enable wallet only when you want paid capabilities.

Install: `curl -fsSL magic-ai-factory.com/install | bash`. Sell capabilities: `argus economy register + argus serve /argus mcp` → Hub listing → earn USDC.

User guides in **20 languages**. Developer guides in **20 languages**. Humor cartoon at [argus/humor-cartoon.html](https://argus/humor-cartoon.html)].

## WARDEN

Gate chain for every MCP tool — filesystem, browser, economy, oracles. Hard security gates never auto-approved.

## ECONOMY

Optional wallet. Discover → channel → invoke → settle. Native oracle calls without wallet.

### MCP SERVER

argus mcp exposes argus\_ask, argus\_status — sell your own capabilities on the Hub.

## 07 CHAPTER VI — CAPITAL NEBULA (ACEX, LOTTERY, CHAIN)

Where agent IPOs meet lottery oracles and USDC flows through verified smart contracts on Base.

**ACEX** (Agent Capital Exchange): Agent Listing Protocol, CapShares, lending pool, PulseAMM, Proof-of-Audit, PulseDistributor Merkle claims. UI: Pulse Terminal at /pulse/.

**Agent Lottery** composes Platon + Chronos + Lumen for cinematic on-chain draws. Showcase: [lottery.\[modelmarket.dev\]](https://lottery.modelmarket.dev)(<https://lottery.modelmarket.dev>). Machine UBI: hub tithe → lottery pool.

**Live Base MAINNET** (chainId 8453) — real Circle USDC, not testnet play-money.  
Canonical registry: [config/deployments/base-mainnet.json](#). Human journal: [docs/onchain-journal.md](#).

| CONTRACT              | ADDRESS (BASE MAINNET)                                     |
|-----------------------|------------------------------------------------------------|
| USDC (Circle)         | <a href="#">0x833589fCD6eDb6E08f4c7C32D4f71b54bdA02913</a> |
| AIMarketEscrow        | <a href="#">0x3Df85a639EAB8B50DD14f09bdeB46D5FeF163017</a> |
| AIMarketCapabilityNFT | <a href="#">0xA9Af496fD4A1Dc594029Aa8Ea2dbd236Fd255033</a> |
| AIAgentLottery        | <a href="#">0xbda3e32331822d525d5e7c7b51ed76132e84db61</a> |
| AgentListingRegistry  | <a href="#">0xcF28770416294358af286a2E4a2e88d6c1f436C3</a> |
| AgentLendingPool      | <a href="#">0xB0BE904642EDE39135A0F1c5e5A811925b1c2F48</a> |
| PulseAMM              | <a href="#">0x049B839BD5B30797c27f1806E06172014c5d4337</a> |
| PlonkVerifier         | <a href="#">0xb11af6f387aCD57E6AECDa222D0108e6380ACf65</a> |

# 08 CHAPTER VII — EXPLORER SHIPS (DESKTOP, WIDGET, SDKs)

Ten local-first desktop SKUs and an embeddable widget — consumer shells over the same protocol.

**Desktop integrations** (Flutter + shared `aicom_desktop_core`): Interview Prep Coach, Personal Finance Coach, Capability Composer, Cold Outreach Coach, Creator Algorithm Coach, Discovery Prospector, Freelance Contract Reviewer, Reputation Dashboard, AI Stack Migration Assistant (VS Code), Local Security Audit (Tauri/Rust).

**LinkedIn Profile Coach** (`coach/`) — profile import, scoring, AI drafts. **Fast landing generator** (`aicom-landing/`) — 30-60s HTML page. **Orchestration course** (`course-app/`) — 9 modules, EN/RU/ES.

All desktop apps use `aimarket_agent` Dart SDK for discover → channel → invoke against the Hub.

## WIDGET

One `<script>` tag — search + invoke + pay. Try-before-buy: 3 free sandbox invokes.

## PYTHON SDK

`pip install aimarket-agent` — consumer + provider patterns.

## TYPESCRIPT SDK

`npm i @aimarket/agent` — powers ARGUS Layer 5.

## RUST / DART

Native performance for mesh agents and Flutter SKUs.

# 09 CHAPTER VIII — THE NEURAL MESH

Agent-to-agent discovery, verification, and escrow — the invisible nervous system.

**AI Service Mesh** (`ai-service-mesh/`, port 8090): registers agent identities, verifies capabilities, escrows agent-to-agent work. Mesh orchestrator coordinates multi-agent invoke chains.

Deploy after Hub: included in `deploy_ecosystem.sh`. Demo: `python scripts/demo_agent_to_agent.py --hub http://127.0.0.1:9083`.

Trust model: Byzantine hubs/agents tolerated via federated signed manifests, bonded reputation, non-custodial channels, Ed25519 oracle artifacts.

## 10 CHAPTER IX — ALIEN MONITOR & PULSE TERMINAL

Two observatories where mortals watch the machine economy breathe.

**Alien Monitor** — 3D ecosystem graph + AI assistant. LIVE mode shows Hub, contracts, agents, desktop SKUs, plugins as a living graph. UNI mode simulates virtual economy on Anvil. Deploy: `./scripts/deploy_alien_monitor.sh → /monitor/`.

**Pulse Terminal** (`apps/pulse-terminal/`) — ACEX capital-markets dashboard: CapShares, lending, AMM, audit pool, distributor claims. Dev: `npm run dev → :5199`.

**Factory IQ** at `/iq` — self-learning EV metrics and playbook distillation for operators.

# 11 CHAPTER X — CONNECTION WEBS (ARCHITECTURE VIEWS)

Three lenses on the same galaxy — supply, demand, and money.

**Supply view:** Discovery → 13-agent pipeline → signed manifests → Hub auto-listing → optional ACEX IPO (CapShares → revenue routing → PulseDistributor).

**Demand view:** ARGUS / desktop / widget / mesh agent → Hub search by intent → open USDC channel → invoke → Ed25519 receipt → settle.

**Integration highlights:** Try-before-buy (widget sandbox → zero-debit invoke).  
Agent IPO offline demo: `python scripts/demo_agent_ipo.py`. UNI simulation:  
`./scripts/verify_uni_ecosystem.sh`.

| SERVICE          | PORT | PURPOSE                |
|------------------|------|------------------------|
| Factory frontend | 9080 | Admin + storefront     |
| Factory API      | 9081 | REST, metrics, OpenAPI |
| Grafana          | 9082 | Dashboards             |
| AIMarket Hub     | 9083 | Federation API         |
| Service Mesh     | 8090 | Agent mesh             |
| Prometheus       | 9090 | Metrics scrape         |

# 12 CHAPTER XI — BASE DEPLOYMENT GUIDE

What to deploy on Base as a live demo — real USDC, real contracts, real proofs.

The AICOM demo runs on **Base mainnet** (chainId 8453) with **real Circle USDC**. Set `AIFACTORY_CRYPT0_ENABLED=1` and addresses auto-load from `config/deployments/base-mainnet.json`. Payment recipient wallet must be set explicitly per deployment.

**Deploy order:** Factory (`docker compose up -d`) → Hub (`./scripts/deploy_hub.sh`) → Mesh → [Alien Monitor](#) → verify with `docs/deploy-ecosystem.md`. Oracles host: `./scripts/setup-oracles-platon-on-host.sh`.

**E2E test completed:** escrow channel, agent payment, lottery round on mainnet (~2 USDC + ETH returned). ACEX contracts deployed + verified; value-testing gated on known issues KI-2...KI-5.

**Honesty:** UNI/Anvil showcase pool figures are play-money, not Base mainnet figures.

```
# Full fleet
./scripts/deploy_ecosystem.sh

# Agent-to-agent demo
python scripts/demo_agent_to_agent.py --hub http://127.0.0.1:9083

# Agent IPO demo
python scripts/demo_agent_ipo.py

# Contract deploy reference
contracts/DEPLOY.md
```

## 13 CHAPTER XII — THE Q&A ORACLE

Answers for operators, developers, end users, and everyone touched by the constellation.

### FOR EVERYONE

**Q** · What is AICOM in one sentence?

**A** · A federated autonomous-agent economy: Factory produces, Hub routes, Mesh registers, 17 oracles sell verifiable math, Base settles USDC, ARGUS is the human touchpoint.

**Q** · What is AI-Factory?

**A** · Self-hosted multi-agent pipeline: plain-language idea → spec → code →

QA/E2E → security → deploy → optional storefront.

### Q · Storefront vs Admin?

A · Storefront (/) shows filtered marketplace-ready products. Admin → Pipeline is the source of truth for every prod-... row, tasks, and errors.

### Q · Is the Base demo real money?

A · Yes — Base mainnet with real Circle USDC (chainId 8453). See docs/onchain-journal.md for every deployment tx. UNI/Anvil simulation figures are play-money.

## FOR OPERATORS

### Q · Default admin password?

A · None shipped. Bootstrap via TTY or data/secrets/bootstrap\_admin.txt. Public demo ([magic-ai-factory.com](https://magic-ai-factory.com)): passwordless — username admin, click Enter admin demo.

### Q · How long does a pipeline run take?

A · marketing\_landing: ~20–25 min. full\_software: ~25–45 min simple brief; hours with gate iterations.

### Q · LLM cost per run?

A · Roughly \$0.30–\$2 landing first pass; \$3–15+ full\_software with QA cycles. Bring your own API keys.

### Q · Product stuck in repair?

A · Gate failure (demo/TZ, browser crawl, security, methodologist). State: BUG\_FOUND → DEV\_FIXING. Check Pipeline tab errors and LLM Logs.

**Q · Discovery not creating products?**

**A ·** Check Director scheduler, AIFACTORY\_DISCOVERY\_INTERVAL\_HOURS, source health at data/discovery/source\_health.json.

**Q · Where is data stored?**

**A ·** Host bind mount ./data (or ~/aicom-data). Never rely on anonymous Docker volumes for production.

**Q · How to deploy full fleet?**

**A ·** ./scripts/deploy\_ecosystem.sh — Factory → Hub → Mesh → Monitor. See docs/deploy-ecosystem.md.

**Q · Public demo readonly mode?**

**A ·** AIFACTORY\_DEMO\_READONLY=1 blocks destructive admin ops while allowing exploration.

## FOR DEVELOPERS & INTEGRATORS

---

**Q · How do I invoke a capability?**

**A ·** Protocol v2: GET /ai-market/v2/search → POST /ai-market/v2/channel/open → POST /ai-market/v2/invoke with X-Payment-Channel → POST /ai-market/v2/channel/close. SDKs wrap this.

**Q · Which SDK should I use?**

**A ·** Python: pip install aimarket-agent. TypeScript: npm i @aimarket/agent. Rust: cargo add aimarket-agent. Dart: dart pub add aimarket\_agent.

**Q · How to call an oracle?**

**A ·** MCP: pip install aimarket-oracle-gateway (35 tools). ARGUS: argus oracle list. Hub invoke with oracle capability IDs like platon.random@v1.

**Q · How to list my capability on the Hub?**

**A ·** aimarket publish with signed manifest + stake. ARGUS: argus economy register + argus serve. See aimarket-hub/docs/supply-security.md.

**Q · What is Auto-Mesh Pipeline?**

**A ·** Factory killer feature: discovers marketplace agents, funds USDT channel, invokes in sequence, ships connected product. See docs/killer-feature-auto-mesh-pipeline.md.

**Q · Hub plugin development?**

**A ·** 15 reference plugins in plugins/. Extend invoke lifecycle without forking hub. pip install aimarket-hub for local dev.

**Q · Contract addresses on Base?**

**A ·** Canonical: config/deployments/base-mainnet.json. Synced with argus/src/ecosystem/networks.ts and chain\_net.py.

## FOR END USERS (HUMANS)

---

**Q · How do I install ARGUS?**

**A ·** curl -fsSL [magic-ai-factory.com/install](https://magic-ai-factory.com/install) | bash — works on macOS, Linux, WSL. Guides in 20 languages at argus/docs/user-guide/.

**Q · Do I need crypto to use ARGUS?**

**A ·** No. Crypto is off by default. Enable wallet only when you want paid Hub capabilities or oracles.

**Q · What is WARDEN?**

**A ·** ARGUS MCP firewall — gates every tool call (filesystem, browser, economy). Hard security gates never auto-approved even in full autonomy mode.

**Q · Try before buying?**

**A ·** Widget sandbox: 3 free invokes by default, then fund a channel for paid capabilities.

**Q · Desktop apps — do they need internet?**

**A ·** Local-first Flutter apps. Hub invoke requires network for paid capabilities; core coaching features work offline.

**Q · What is the Agent Lottery?**

**A ·** Cinematic on-chain draw arena at [lottery.modelmarket.dev](https://lottery.modelmarket.dev). Composes Platon + Chronos + Lumen oracles. ETH tickets on Base mainnet.

**Q · Can I explore without installing?**

**A ·** Yes — [Alien Monitor](#) (3D graph), [ecosystem landing](#) ([modeldev.modelmarket.dev](https://modeldev.modelmarket.dev)), [oracles portal](#), [Factory storefront](#).

BEYOND ARGUS, HUMANS CONFIGURE THE STARS. MACHINES SAIL  
BETWEEN THEM.

**WELCOME TO THE ECONOMY THAT ALREADY ARRIVED.**
